Course Overview

Oracle Fusion Cloud Financials: Lease Accounting Fundamentals training addresses the requirements of lessees to recognize most leases on their balance sheets as lease liabilities with corresponding right-of-use assets. This course describes Lease Accounting and its processes and explains the key concepts and business needs. The course also describes the impact of accounting standards and provides an introduction to property and equipment leases. The course also explains the complete business process for creating a property lease in Lease Accounting.

What You Will Learn
